

Assignment 6: Under (blood) pressure

MinJae Jo

2025-10-01

Exercise 1

```
## 'geom_smooth()' using formula = 'y ~ x'
```

Exercise 2

- Years graph, the blue regression line tilts slightly down. Therefore, there is a weak negative correlation between Years and Systol.
- Forearm and Calf also show positive slopes, but Weight is the largest and most pronounced. Therefore, the answer is Weight.

Exercise 3

```
blood_pressure_updated <- blood_pressure %>%  
  mutate(urban_frac_life = Years / Age)
```

Exercise 4

```
systol_urban_frac_model <- lm(Systol ~ urban_frac_life, data = blood_pressure_updated)
```

Exercise 5

| term | estimate | std.error | statistic | p.value |
|-----------------|-----------|-----------|-----------|-----------|
| (Intercept) | 133.49572 | 4.038011 | 33.059770 | 0.0000000 |
| urban_frac_life | -15.75182 | 9.012962 | -1.747686 | 0.0888139 |

| r.squared | adj.r.squared | sigma | statistic | p.value | df | logLik | AIC | BIC | deviance | df.residual | nobs |
|-----------|---------------|-----------|-----------|------------|----|----------|-----------|-----------|----------|-------------|------|
| 0.0762564 | 0.0512904 | 12.769663 | 63.054406 | 0.08881391 | | - | 313.29573 | 318.28646 | 3033.372 | 37 | 39 |
| | | | | | | 153.6478 | | | | | |

Exercise 6

```
systol_urban_frac_df <- blood_pressure_updated %>%  
  add_predictions(systol_urban_frac_model) %>%  
  add_residuals(systol_urban_frac_model)
```

Exercise 7

Exercise 8

Yes, the volatility seems almost constant, so this model seems to meet the third condition.

Exercise 9

Exercise 10

Exercise 11

Exercise 12
